VAMSI BOYANA

Software Developer

+91-9581024460 | vamsiboina1800@gmail.com | LinkedIn | GitHub | Portfolio | Hyderabad, Telangana

PROFESSIONAL SUMMARY

Backend Developer with 2.5+ years of experience designing scalable REST APIs and backend systems using **Node.js, Express.js, MongoDB, and MySQL**. Experienced in authentication, database optimization, real-time services, and high-traffic production platforms. Focused on performance, reliability, and maintainable system architecture.

TECHNICAL SKILLS

Backend Development: Node.js, Express.js, JavaScript, REST API Design, CRUD Services, MVC Architecture, Middleware Development, API Integration, Scalable API Design & Architecture

Databases: MongoDB (Schema Design, Indexing, Aggregation Pipelines, Query Optimization), MySQL (CRUD & Basic Queries)

Authentication & Security: JWT Authentication, RBAC Authorization, API Security, Input Validation, Secure Session & Token Management

Real-Time & Integration: WebSockets, JSON APIs, Third-Party API Integration (Solana Web3.js, Raydium SDK, Telegram Bot API)

Tools & Platforms: VS Code, Git, GitHub, Postman, Swagger, AWS S3, CI/CD Basics (GitHub Actions)

PROFESSIONAL EXPERIENCE

Software Developer — **Hyderabad**
String Metaverse Ltd — **Feb 2025 – Present**

- Engineered **40+ REST APIs** handling **10k+** daily requests, improving performance through MongoDB optimization.
- Built backend services for multi-wallet gaming and trading platforms with real-time price streaming and automated swap workflows.
- Designed modular Node.js services with MVC architecture and reusable middleware for scalable deployments.
- Established RBAC and token-based authentication across **7+** administrative roles, strengthening security for withdrawal workflows.

Analyst — **Hyderabad**
GlobalLogic — **Aug 2023 – Feb 2025**

- Developed backend services for QA-driven platforms, improving audit accuracy by **20%** through structured logging and secure data workflows.
- Created REST APIs for internal workflows, reducing validation time by **25%** through efficient MongoDB modeling.
- Improved production reliability through backend validations and monitoring, reducing data errors by **15%.**

KEY PROJECTS

Web3 Automated Blockchain Trading System

Cryptocurrency Trading Backend on the Solana Blockchain

- Built a Solana backend using Web3.js and Raydium SDK to monitor liquidity pools and execute automated token swaps.
- Implemented retry handling and de-duplication to maintain stable high-frequency trade execution.
- Integrated on-chain confirmations and slippage validation to protect trades during volatile market conditions.

Tech Used: Solana Web3.js, Raydium SDK, Wallet Management Systems, Token Swaps, Liquidity Pool Monitoring

Gaming Platform Backend Infrastructure

Backend systems for String Drive, String Tetris, String Games, and Swift Ads

- Architected scalable backend services for authentication, referrals, ad workflows, and real-time leaderboards across independent admin and user platforms.
- Optimized reward logic and transaction pipelines for scalable gameplay analytics and withdrawal alerts.
- Implemented secure wallet validation workflows, improving withdrawal reliability and balance consistency.

Tech Used: JWT-Based RBAC Systems, Middleware Development, Telegram Bot API, Real-Time Leaderboards

Tech Stack: Node.js, Express.js, JavaScript, MongoDB, MySQL, REST APIs, WebSockets, JWT Authentication, RBAC Authorization, AWS S3, Postman, Swagger

EDUCATION

Bachelor of Technology – **Electrical & Electronics Engineering** - Dadi Institute of Engineering & Technology **| 2022 | CGPA: 7.3**
