VAMSI BOYANA

Software Developer

+91 9581024460 | vamsiboina1800@gmail.com | LinkedIn | GitHub | Portfolio | Hyderabad, Telangana

PROFESSIONAL SUMMARY

Software Developer with 2.5+ years of experience building scalable API services and real-time backend systems. Skilled in backend architecture design, database performance optimization, and delivering secure, production-grade solutions for high-traffic applications. Proven ability to develop reliable and efficient backend services in fast-paced development environments.

TECHNICAL SKILLS

Backend Development: Node.js, Express.js, JavaScript, REST API Development, CRUD Services, MVC Architecture, Monolithic & Scalable Backend Systems, Debugging

Databases: MongoDB (Database and Schema Design, Indexing, Aggregation Pipelines, Query Optimization), MySQL (Basic querying and CRUD operations),

Security, Real-Time & API Integration: JWT Authentication, RBAC, WebSockets, Real-Time Data Processing, Third-Party & Web3 API Integrations

Cloud Platforms, Dev & Productivity Tools: AWS S3, Postman and Swagger, CI/CD fundamentals (GitHub Actions and Git workflows). Leverage AI tools for backend optimization, and documentation to improve development productivity.

PROFESSIONAL EXPERIENCE

Software Developer — **Feb 2025 – Present**
String Metaverse Ltd — **Hyderabad**

- Engineered 40+ REST APIs handling 10k+ daily requests for crypto trading and gaming platforms, improving performance by optimizing MongoDB queries, indexing strategies, and aggregation pipelines.
- Implemented secure RBAC and token-based authentication across admin approvals, withdrawal workflows, and reward systems, improving backend security and access control in production trading and gaming platforms.
- Utilized AWS S3 object storage for secure file uploads and encrypted key management. Configured system email alerts for incident monitoring.

Analyst — **Aug 2023 – Feb 2025**
GlobalLogic — **Hyderabad**

- Developed backend services for QA-driven platforms, enhancing audit accuracy and system stability through secure logging and structured data workflows.
- Created REST APIs for user workflows, admin validation, and task tracking, creating scalable data models for audit logs, submissions, image storage, and feedback management.
- Enhanced system reliability through backend validations, structured error handling, and monitoring across production systems, improving operational stability and transaction data accuracy.

Technologies: Node.js, Express.js, MongoDB, MySQL, AWS S3, JWT, RBAC, Nodemailer, Telegram Bot API, Postman, Swagger, Manual Deployment via FTP

KEY PROJECTS

Web3 Automated Blockchain Trading System

Cryptocurrency trading system on the Solana blockchain

- Designed blockchain backend services using Solana Web3.js and Raydium SDK to track liquidity pools and execute automated token swaps based on price, liquidity, and slippage conditions.
- Configured swap queue, de-duplication, retry mechanisms, and on-chain confirmation checks to handle concurrent trades during high market volatility.

Gaming Platform Backend Infrastructure

Backend systems for String Drive, String Tetris, String Games, and Swift Ads

- Architected service-based backend system handling authentication, referrals, digital wallets, task systems, and real-time leaderboards for gaming platforms.
- Executed admin approval workflows, reward distribution, and optimized game history and transaction data pipelines for scalable gameplay analytics, email notification service using Nodemailer.

EDUCATION

Bachelor of Technology – Electrical & Electronics Engineering - Dadi Institute of Engineering & Technology **| 2022 | CGPA: 7.3**
