

VAMSI BOYANA

Software Developer

+91-9581024460 | vamsiboina1800@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Hyderabad, India

PROFESSIONAL SUMMARY

Backend Developer with **2.5+ years** of experience building scalable backend systems, REST APIs, and data-driven applications. Experienced in designing secure authentication workflows, optimizing database performance, and developing high-performance, scalable solutions for blockchain, gaming, and fintech platforms. Skilled in monolithic and microservices architecture, API integration, workflow automation, and end-to-end backend development from development to deployment.

TECHNICAL SKILLS

Languages & Frameworks: Node.js, Express.js, and JavaScript (ES6+)

API Development & Architecture: REST API Design, MVC Architecture, Monolithic and Microservices Architectures

Databases & ORM: MongoDB, Mongoose (Schema Design, Indexing, Aggregation), MySQL, PostgreSQL, and Prisma ORM

Authentication & Security: JWT, RBAC Authorization, API Security, Schema Validation, Secure Session & Token Management

Real-Time & Integrations: WebSockets (Socket.IO), JSON APIs, Third-Party API Integrations, and Raydium SDK

Tools & DevOps: Git, GitHub, GitHub Actions, Postman, Swagger, AWS S3, Redis, and CI/CD Pipelines

PROFESSIONAL EXPERIENCE

Software Developer

Hyderabad

String Metaverse LTD

Feb 2025 – Present

- Engineered **40+ production REST APIs** across blockchain, gaming, and rewards platforms, improving feature delivery speed.
- Created secure auth and wallet-access workflows supporting **10,000+** monthly user transactions with zero critical security flaws.
- Built **async pipelines and background workers** for reward distribution, cutting transaction failure rates by **90%** via retries.
- Optimized database performance via **precise indexing** and query tuning, reducing latency by **35%** for high-volume API workloads.

Analyst

Hyderabad

GlobalLogic

Aug 2023 – Feb 2025

- Designed and deployed **RESTful services** with schema validation and error handling, cutting production failures by **20%**.
- Optimized **MongoDB schemas** and data-processing workflows, reducing validation latency by **25%**.
- Improved data quality through **backend validation, monitoring**, and issue resolution, reducing operational errors by **15%**.
- Delivered **20+ backend APIs** supporting internal enterprise tools, streamlining workflows and improving response speeds by **30%**.

PROJECTS

Bills on Chain – Blockchain-Based Billing System

Blockchain-powered bill management and verification platform

- Architected a scalable backend for bill upload, verification, and NFT-based bill ownership tracking, processing 10,000+ monthly transactions and reducing manual effort by 50%.
- Established secure authentication and authorization workflows using Better Auth for secure user and admin access.
- Built async processing pipelines and background workers for bill verification, NFT minting, and mechanized workflow execution.
- Developed analytics APIs and efficient database queries to support real-time dashboard reporting.

Tech Used: Node.js, PostgreSQL, Prisma ORM, Redis, Better Auth, AWS S3, Pinata IPFS, REST APIs, Background Workers

Gaming Platform Backend Infrastructure

Backend systems for String Drive, String Tetris, String Games, and Swift Ads

- Designed reward, referral, and ad-management workflows supporting thousands of platform interactions.
- Built real-time leaderboard and gameplay analytics systems to support user engagement and performance tracking.
- Implemented wallet validation and withdrawal monitoring workflows, improving transaction reliability and balance consistency.

Tech Used: Node.js, Express.js, JavaScript, MongoDB, REST APIs, JWT Authentication, RBAC, Telegram Bot API

Web3 Automated Blockchain Trading System

Cryptocurrency Trading Backend on the Solana Blockchain

- Built an automated trading backend to monitor liquidity pools and execute token swaps on the Solana blockchain.
- Configured transaction validation, retry mechanisms, and slippage protection to improve trading reliability and security.

Tech Used: JWT-Based RBAC Systems, Solana Web3.js, Raydium SDK, Wallet Integration

EDUCATION

B.Tech in Electrical & Electronics Engineering – Dadi Institute of Engineering & Technology

Jun 2018 – Jul 2022

CERTIFICATIONS

MongoDB Node.js Developer Path – SmartBridge & MongoDB, Inc. | [Certificate Link](#)
