VAMSI BOYANA

Software Developer

+91-9581024460 | vamsiboina1800@gmail.com | LinkedIn | GitHub | Portfolio | Hyderabad, Telangana

PROFESSIONAL SUMMARY

Backend Developer with 2.5+ years of experience building scalable REST APIs using Node.js, Express.js, MongoDB, and MySQL**.** Skilled in authentication, database optimization, and real-time services for high-traffic production platforms.

Focused on delivering high-performance, reliable, and maintainable backend architectures, with strong emphasis on system scalability and efficient API design**.**

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, Node.js, Express.js

API & Architecture: REST API Design, CRUD Operations, MVC Architecture, Middleware Development, Scalable System Design, Microservices Architecture

Databases: MongoDB (NoSQL), Mongoose (Schema Design, Indexing, Aggregation Pipelines, Query Optimization), MySQL

Authentication & Security: JWT Authentication, RBAC Authorization, API Security, Input Validation, Secure Token & Session Management

Real-Time & Integrations: WebSockets (Socket.IO), JSON APIs, API Integrations

Tools & DevOps: VS Code, Git, GitHub, Postman, Swagger, AWS S3, GitHub Actions, CI/CD

PROFESSIONAL EXPERIENCE

Software Developer — **Hyderabad**
String Metaverse Ltd — **Feb 2025 – Present**

- Engineered **40+ RESTful APIs** handling **10k+** daily requests, optimizing MongoDB queries for performance.
- Built backend services for multi-wallet gaming and trading platforms, integrating real-time price streaming and managed swap workflows.
- Designed modular Node.js services with MVC architecture and reusable middleware for scalable deployments.
- Established RBAC (Role-Based Access Control) and token-based authentication across **7+** administrative roles, strengthening security for withdrawal workflows.

Analyst — **Hyderabad**
GlobalLogic — **Aug 2023 – Feb 2025**

- Developed backend services for QA-driven platforms, improving audit accuracy by **20%** through structured logging and secure data workflows.
- Built REST APIs for internal workflows, reducing validation time by **25%** through efficient MongoDB modeling.
- Improved production reliability through backend validations and monitoring, reducing data errors by **15%.**

KEY PROJECTS

Web3 Automated Blockchain Trading System

Cryptocurrency Trading Backend on the Solana Blockchain

- Built a Solana backend using Web3.js and Raydium SDK to monitor liquidity pools and execute automated token swaps.
- Implemented retry handling and de-duplication to maintain stable high-frequency trade execution.
- Integrated on-chain confirmations and slippage validation to protect trades during volatile market conditions.

Tech Used: Solana Web3.js, Raydium SDK, Wallet Management Systems, Token Swaps, Liquidity Pool Monitoring

Gaming Platform Backend Infrastructure

Backend systems for String Drive, String Tetris, String Games, and Swift Ads

- Architected scalable backend services for authentication, referrals, ad workflows, and real-time leaderboards across admin and user platforms.
- Enhanced reward logic to enable scalable gameplay analytics and real-time withdrawal alerts.
- Enabled secure wallet validation workflows, improving withdrawal reliability and balance consistency.

Tech Used: JWT-Based RBAC Systems, Middleware Development, Telegram Bot API, Real-Time Leaderboards

Tech Stack: Node.js, Express.js, JavaScript, MongoDB, MySQL, RESTful APIs, WebSockets, JWT Authentication, RBAC Authorization, AWS S3, Postman, Swagger

CERTIFICATIONS

MongoDB Node.js Developer Path – SmartBridge & MongoDB, Inc. | Certificate Link

EDUCATION

Bachelor of Technology (B.Tech) in Electrical & Electronics Engineering – Dadi Institute of Engineering & Technology | **2022**
