VAMSI BOYANA

Software Developer

+91-9581024460 | vamsiboina1800@gmail.com | LinkedIn | GitHub | Portfolio | Hyderabad, Telangana

PROFESSIONAL SUMMARY

Backend Developer with 2.5+ years of experience designing scalable REST APIs and backend systems using **Node.js, Express.js, MongoDB, and MySQL**. Experienced in authentication, database optimization, real-time services, and high-traffic production platforms. Focused on performance, reliability, and maintainable system architecture.

TECHNICAL SKILLS

Backend Development: Node.js, Express.js, JavaScript, REST API Design, CRUD Services, MVC Architecture, Middleware Development, API Integration, Scalable API Design & Architecture

Databases: MongoDB (Schema Design, Indexing, Aggregation Pipelines, Query Optimization), MySQL (CRUD & Basic Queries)

Authentication & Security: JWT, RBAC Authorization, API Security, Input Validation, Secure Session & Token Management

Real-Time & Integration: WebSockets, JSON APIs, Third-Party API Integration (Solana Web3.js, Raydium SDK, Telegram Bot API)

Tools & Platforms: VS Code, Git, GitHub, Postman, Swagger, AWS S3, CI/CD Basics (GitHub Actions)

PROFESSIONAL EXPERIENCE

Software Developer — **Hyderabad**
String Metaverse Ltd — **Feb 2025 – Present**

- Designed and deployed **40+ REST APIs** supporting trading and gaming platforms with 10k+ daily transactions and optimized MongoDB indexing, reducing average query latency by **30%**
- Architected modular Node.js services using MVC pattern and reusable middleware to support scalable deployment across multiple gaming products
- Built multi-wallet transaction workflows with validation layers, improving withdrawal reliability and preventing duplicate payouts
- Executed RBAC authorization across **7+** admin roles, strengthening security for financial operations

Analyst — **Hyderabad**
GlobalLogic — **Aug 2023 – Feb 2025**

- Built internal REST APIs to automate workflow approvals and audit tracking processes
- Strengthened data integrity by implementing layered validation checks, reducing backend errors by **15%**
- Refactored MongoDB schemas and indexing strategy, cutting validation processing time by **25%**
- Introduced structured request-level logging to improve audit traceability and reduce reporting discrepancies by **20%**

KEY PROJECTS

Web3 Automated Blockchain Trading System

Cryptocurrency Trading Backend on the Solana Blockchain

- Developed a Solana-based trading backend using Web3.js and Raydium SDK to monitor liquidity pools and execute automated token swaps.
- Structured idempotent execution with signature tracking and controlled retries to eliminate duplicate transactions
- Implemented real-time liquidity monitoring with price validation to avoid stale trade execution
- Integrated on-chain confirmation checks and slippage thresholds to mitigate high-risk transactions

Tech Used: Solana Web3.js, Raydium SDK, Wallet Management Systems, Token Swaps, Liquidity Pool Monitoring

Gaming Platform Backend Infrastructure

Backend systems for String Drive, String Tetris, String Games, and Swift Ads

- Built backend services for authentication, referrals, ad workflows, and real-time leaderboards across admin and user platforms.
- Engineered reward calculation and transaction processing pipelines for accurate balance and payout handling
- Delivered wallet validation and withdrawal authorization logic with JWT-based RBAC controls
- Enhanced leaderboard and analytics queries through MongoDB aggregation restructuring and index tuning

Tech Used: JWT-Based RBAC Systems, Middleware Development, Telegram Bot API, Real-Time Leaderboards

Tech Stack: Node.js, Express.js, JavaScript, MongoDB, MySQL, WebSockets, JWT, RBAC, AWS S3, Git, GitHub Actions

EDUCATION

B.Tech, Electrical & Electronics Engineering – Dadi Institute of Engineering & Technology — **Visakhapatnam – 2022**
