VAMSI BOYANA

Software Developer

+91 9581024460 | vamsiboina1800@gmail.com | LinkedIn | GitHub | Hyderabad, Telangana

PROFESSIONAL SUMMARY

Software Developer with 2.5+ years of experience designing and building scalable backend systems and high-performance API services using **Node.js, Express.js, MongoDB, and MySQL**. Proven expertise in secure authentication, optimized database architecture, real-time WebSocket communication, and delivering reliable production-grade backend platforms.

TECHNICAL SKILLS

Backend Development: Node.js, Express.js, JavaScript, REST API Development, CRUD Services, MVC Architecture, Monolithic & Distributed Backend Systems, Debugging

Databases: MongoDB, MySQL, Database and Schema Design, Indexing, Aggregation Pipelines, Query Optimization

Security, Real-Time & API Integration: JWT Authentication, RBAC, WebSockets, Real-Time Data Processing, Third-Party API Integration (Solana Web3.js, Raydium SDK, Telegram Bot API, External REST APIs)

Cloud Platforms & Development Tools: AWS S3, Git, Postman, Swagger, CI/CD Fundamentals (GitHub Actions pipelines)

PROFESSIONAL EXPERIENCE

Software Developer

String Metaverse Ltd **Feb 2025 – Present | Hyderabad**

- Engineered **40+ REST APIs** handling **10k+ daily requests** for crypto trading and gaming platforms, improving performance by optimizing MongoDB queries, indexing strategies, and aggregation pipelines.
- Integrated **external blockchain and exchange APIs (Solana Web3.js, Raydium SDK, Telegram Bot API)** to support wallet management**, real-time WebSocket price streaming,** and algorithmic trading bot execution.
- Implemented **secure RBAC and token-based authentication** across admin approvals, withdrawal workflows, and reward systems, improving backend security and access control in production trading and gaming platforms.
- Utilized **AWS S3** object **storage for secure file uploads and encrypted key management**. Configured system email alerts for incident monitoring.

Analyst

GlobalLogic **Aug 2023 – Feb 2025 | Hyderabad**

- Developed **backend services** for QA-driven platforms, enhancing audit accuracy and system stability through secure logging and structured data workflows**.**
- Created **REST APIs** for user workflows, admin validation, and task tracking, creating **scalable data models** for audit logs, submissions, image storage, and feedback management.
- Enhanced **system reliability** through **backend validations**, **structured error handling**, and monitoring, improving **operational stability** and **data accuracy**.

Technologies: Node.js, Express.js, MongoDB, MySQL, AWS S3, JWT, RBAC, Nodemailer, Telegram Bot API, Postman, Swagger, GitHub Actions

KEY PROJECTS

Web3 Automated Blockchain Trading System

Cryptocurrency trading system on the Solana blockchain

- Designed blockchain backend services that track **Solana and Raydium liquidity pools** and execute token swaps based on price, liquidity, and slippage conditions.
- Configured **swap queue**, **de-duplication**, **retry mechanisms**, and **on-chain confirmation checks** to handle **concurrent trades** during market volatility.

Gaming Platform Backend Infrastructure

Backend systems for String Drive, String Tetris, String Games, and Swift Ads

- Architected service-based backend system handling **authentication**, referrals, digital wallets**,** task systems**,** and **real-time leaderboards** for gaming platforms.
- Executed admin approval workflows, reward distribution, and **optimized game history** and transaction **data pipelines for scalable gameplay analytics**, email notification service using **Nodemailer**.

EDUCATION

Bachelor of Technology – Electrical & Electronics Engineering - Dadi Institute of Engineering & Technology **| 2022 | CGPA: 7.3**
